    <head>
        <title>JS Demo</title>
        <h1>JS Functions</h1>
    </head>
    <body>
        <script src="js/valid.js"></script>
        <form name="validationform" method="post" onsubmit="return fun()" action="action.html">

            Name<input type="text" name="nameval">
            Designation<input type="text" name="desgval">

            <input type="submit">
        </form>
    </body>
</html>
```

Valid.js:

```javascript
function fun()
{
    var name=validationform.nameval.value;
    var desg=validationform.desgval.value;

    if(name=="")
    {
        alert("Enter name");
        validationform.nameval.focus();
        return false;
    }
    else if(desg=="")
    {
        alert("Enter Designation");
        validationform.desgval.focus();
        return false;
    }
    else
    {
        return true;
    }
}
```

Action.html:

```html
<h1>Welcome to Action Page</h1>
```

Onload

```html
<!DOCTYPE html>
<html>
    <head>
        <script>
            function Redirect() {
                window.location = "index.html";
            }
        </script>
    </head>

    <body onload="Redirect()">
    </body>
</html>
```

MONGO DB – CURD OPERATIONS

>use Tarak

      switched to db Tarak

Create & Insert

>db.profile.insert({"UID":"1","Name":"Tarak","Designation":"GET","Location":"Mahape"})

>db.Registration.insert({"Reg.No":"10671387","Name":"Tarak","Course":"Mean Stack","Fees":"10000"})

> show collections

>db.profile.find()

Update

db.profile.update({'Name':'Tarak'},{$set:{'Name':'Tarak Krishna'}})

Remove

db.profile.remove({'Name':'Tarak'})

Drop

db.profile.drop()
